DESCRIPTION/OBJECTIVE

The investment seeks high total return with a shift to current income and some capital appreciation over time as the fund approaches and passes the target retirement date. The fund is a "fund of funds" that invests in other J.P. Morgan Funds (underlying funds), and is generally intended for investors expecting to retire around the year 2050 (target retirement date). It is designed to provide exposure to a variety of asset classes through investments in underlying funds, and over time the fund's asset allocation strategy will change.

There is no assurance the objectives will be met.

The target date is the approximate date when investors plan to start withdrawing their money. The asset allocation of the target date funds will become more conservative as the target date approaches by lessening your equity exposure and increasing your exposure in fixed income type investments. The stated asset allocation may be subject to change. The principal value of an investment in a target date fund is not guaranteed at any time, including the target date, and there is no guarantee that the funds will provide adequate retirement income. A target date fund should not be selected based solely on age or retirement date. It is possible to lose money by investing in securities, including losses near and following retirement.
